Project description

Describe shortly the project and how you plan to use the Talk2m APIs. *

Please review and accept the Terms of Use on the next page.

Terms of use

By submitting this document, you agree to adhere to the following terms and conditions governing the use of Talk2m API services:

- The Talk2m Developer ID is confidential and strictly restricted to your company business use.
- The Talk2m APIs and the Talk2m Developer ID shall be used only for your business purposes and in accordance with the business guidelines and specifications described in API manuals RG-0004 and RG-0005.
- The Talk2m APIs and Developer ID shall not be used to send spam or unsolicited messages; send or store viruses, worms, Trojan horses or other harmful code; disrupt the integrity or performance of Talk2m Services or their data; or attempt unauthorized access to Talk2m Services, systems or networks.
- You shall notify HMS Industrial Networks SA immediately of unauthorized use of any password, account or Developer ID, or any known or suspected security breach.
- Any breach of these terms, the Talk2m Master Services and License Agreement, or unauthorized use of Talk2m Technology or Services is a material breach. HMS Industrial Networks SA may terminate or cancel the Developer ID, account or use of Services for non-compliance.

Conditions

Check every box to confirm acceptance of each condition.

The number of M2web API calls per account is limited to 10 calls/second, aggregated over all users, up to 30,000 calls/day/account. The typical access period is 10 minutes; the service is not intended for real-time data access.

The number of DMWeb API calls is limited to 1 DataMailbox synchronization or data lookup per minute, averaged over a month. The typical retrieval period is 10 minutes; the service is not intended for real-time data access.

For Talk2m Free+ accounts, Ewon devices can upload a maximum of 5,000,000 datapoints per month to Talk2m DataMailbox. API calls return a specific message at the limit; excessive datapoints are disregarded.

For Talk2m Pro/Light accounts, Ewon devices can upload unlimited datapoints per month to Talk2m DataMailbox. Above 10,000,000 datapoints per month, additional data upload is charged to the Talk2m account owner.

Datapoints are buffered for a maximum of 10 calendar days by Talk2m DataMailbox. Datapoints older than 10 days are automatically deleted.

I have read, understood and fully agree with these terms.
